

01 MAKING AXLE CABS Axle cabs in the type of wood and model you want.

All dimensions are approximate and dependent on tools, quantity required and axle pin size.

01 MAKING AXLE CABS

Clamp a wooden plate on the drill press and secure everything.

Drill a hole and insert a dowel

Place the drilled holes on the underside over the dowel and drill the required outer diameter with a plug drill

All drilling depths are preset

And this is what you get

When changing the drill bits it is absolutely essential that everything stays in position

01 MAKING AXLE CABS

Sawing at the required height

Then this is what you get

Sanding by hand

Or with a drumsander

01 MAKING AXLE CABS

Put a dowel in the drilled hole, tight fit.

If necessary, a piece of paper can be placed between the dowel and the hole in the cab

Rounded on the lathe,

with the model and height you want

The used tools

And this is what you get:
